DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this

Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

3. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chan et al., U.S. Patent No. 6,191,224 (hereinafter "Chan"). Chan teaches a process for preparing

Art Unit: 1713

copolymers of pentafluorophenyl acrylate (PFPA) comprising mixing AIBN, a chain transfer agent with PFPA and another monomer in a reaction vessel. See Chan, Examples 1 and 4. The reaction vessel was heated to 70°C for 20 minutes followed by heating to 100°C for 20 minutes. Finally, the reaction vessel was heated to 150°C to remove residual monomer. Chan differs from the present invention in two respects: (1) the ultrasonication treatment is absent and (2) with respect to some dependant claims the specific conditions are different (longer time periods and higher temperatures).

4. First, based on the specification, the ultrasonication treatment is not critical. The comparative data demonstrates the need for concentrations the second process step, not the ultrasonication treatment. Thus, the improvement is questionable and until further declarations are made the limitation is not read into the claims. Second, processes requiring longer time periods and higher temperatures are interpreted by the Examiner as optimization, which is obvious to one of ordinary skill.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Moore et al.,

Art Unit: 1713

U.S. Patent No. 6,288,266 B1 discloses a process for preparing PFPA copolymers using ultraviolet treatment.
